Janet:

I have one other question, Do you have photographs of your inspection where you saw the pesticides?

Janet:

I am sending you a kmz file that can be double clicked and installed on a google earth program that you have installed. We have talked with the Texas State Chemist and they have identified the location of some of the chemicals and areas on the site. We are very interested in the location of the pesticide/herbicide/funjicide storage for the facility. I would appreciate it very much if you could let us know where that storage would have been located on the property.

Thanks
